PD Part Finder

Precise and complete spare part identification for all applications

Increase the value of your parts catalogue and reduce the return rate at the same time through more precise parts identification. How does it work?

Part Finder improves the quality of parts identification in your product range by generating clear and accurate spare parts information.

Why is PD Part Finder the best choice for you?

1. **Reduction of your operating costs by minimizing the return rate.**
2. **Identification of OE parts and accessories based on OE data –** clearly and quickly through VIN-based part identification.
3. **Repair packages with all necessary spare parts for common repair cases.**
4. **Additional option: Determination of the associated labor times**
5. **Suitable for various vehicle identification methods:** VIN, KBA no., engine code, etc.
6. **Available via web services (API)**
7. **Dedicated Support:** You're never on your own – a dedicated contact person will be there to help with any questions or concerns.

PD Part Finder: Repair Calc

Accurate, fast calculation of common repair cases

PD Part Finder: Repair Calc

Accurate, fast calculation of common repair cases

Save valuable time when processing frequent repairs, such as wear-part replacements.

Repair Calc quickly, easily and, above all, accurately determines all spare parts for repair cases – including labour times.

On request, we can create repair packages according to your specifications, e.g. for specific component groups from selected manufacturers.

- **Ideal for online calculations with scheduling for customers**

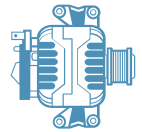

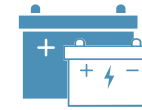

Offer your customers the opportunity to check the estimated costs for repairs themselves in advance and optimise your scheduling.

- **Reduction in the return rate**

By accurately determining the appropriate replacement parts based on vehicle/OE data.

- **Quickly ready for use**

Provision as a data service (ProServices) via our interface.

Brake replacement on front axle Skoda Octavia Combi (5E5) (03/2013 to 02/2017)

Parts

#	Part	Manufacturer-Art.-No.	OE-Part-No.	Unit price	Quantity	Total
1	Brake disc by ATE	24.0125-0145.1	5Q0615301H	80,30 €	2	160,60 €
2	Brake pad set by ATE	13.0460-2785.2	8V0698151	116,00 €	1	116,00 €

Labour times

3	Remove and install both front brake discs (front wheels removed)	80,00 €/h	0,70h	56,00 €
4	Remove and install both front wheels	80,00 €/h	0,30h	24,00 €
5	Removing and installing/replacing front brake pads	80,00 €/h	-	-

Labour times total 1,00h 80,00 €

Sum (net) 356,60 €
19,00 % tax 67,75 €

Total (gross) 424,35 €

PD Part Finder: Oil Calc

Complete calculation for oil service

All data for a complete calculation for the oil service

In addition to specific motor oil items determined on the basis of the specified vehicle, you will receive the required quantity per oil canister or packaging unit to achieve the fill quantity, the labour value for the oil service including filter replacement, and the appropriate oil filter through parts identification.

Skoda Octavia

Parts

Pos.	Description	Manufacturer	Part No.	Total Price
1	Oil Filter	Bosch	F 026 407 157	7,10 €

Engine Oil

4	Oil (Top Tec 4200 5W-30)	Liqui Moly	3707	9,80	4,60 l	45,08
---	--------------------------	------------	------	------	--------	-------

Engine Oil: Precise
determination of the fill quantity

- ✓ Engine oil
- ✓ Oil filter
- ✓ Quantity
- ✓ Labour times

Our comprehensive oil service calculation is the ideal complement to appointment booking systems: it enables a detailed cost estimate in advance and supports early planning and optimisation of workshop and service processes.

PD Part Finder: Maintenance Calc

Manufacturer-compliant inspections, done automatically

PD Part Finder: Maintenance Calc

Manufacturer-compliant inspections, done automatically

The challenge: calculating a manufacturer-compliant inspection for customer vehicles is often time-consuming and imprecise, as the selection of required parts is unclear.

The solution

PD Part Finder: Maintenance Calc not only determines the tasks to be performed but also takes over the laborious manual part identification and delivers a highly precise, comprehensive result for a complete calculation – in seconds.

Inspection with Maintenance Calc

- ✓ Automatic and easy inspection calculation with maintenance plan according to manufacturer specifications
- ✓ Calculation based on IAM spare parts (e.g. TecDoc) and the parts prices of the wholesaler
- ✓ Exact identification of the vehicle through VIN query
- ✓ Determination of the correct maintenance interval based on first registration / mileage
- ✓ Display of the IAM maintenance parts and oils required by the manufacturer, including specifications, filling quantities and oil containers
- ✓ Calculation with all required parts can help increase the shopping cart value
- ✓ Quick calculation of manufacturer-compliant inspections, even over the phone

PD Part Finder: Maintenance Calc

Manufacturer-compliant inspections, done automatically

With Maintenance Calc, independent automotive workshops (IAM) effortlessly and automatically calculate the costs for the upcoming manufacturer-compliant inspection.

The service automatically generates a unique and suitable list of IAM spare parts and prices from the parts dealer for the selected inspection.

In practice, this means: The spare parts that are included in the inspection calculation via PD Maintenance Calc generally fit and do not need to be returned to the parts wholesaler after ordering/delivery.

This reduces the material return rate to a minimum, significantly reducing effort and costs at the parts wholesaler.

Inspection calculation: Skoda Octavia - mileage: 17.561 km

Parts

#	Part	Manufacturer	Article no.	OE part no.		Total
1	Oil filter	Bosch	F 026 407 157	03N115562B	...	7,10 €

PD Part Finder: Maintenance Calc

Manufacturer-compliant inspections, done automatically

Why is Maintenance Calc the best choice for you?

1. Automatic and simple inspection calculation, manufacturer-compliant on an IAM basis (for B2B / B2C use)
2. Vehicle identification through VIN, international vehicle IDs, etc.
3. Determining the correct maintenance interval based on mileage
4. Precise part identification of IAM maintenance parts through OE references
5. Display of the maintenance plan with all work steps specified by the vehicle manufacturer and the required technical data (for B2B use).
6. Reduce your operating costs by minimizing the return rate
7. Can be integrated into IAM parts catalogs via web services
8. Flexible products & services - individual customer requirements possible.
ProDevelop actively supports and assists your project with a personal contact person.
